

## Any Branch Banking

### Technical features

#### 1. Introduction:

Datanet's Any Branch Banking enables customers to make withdrawals, remittances or know their balances at any branch of their bank, anywhere in the country. Customer-sensitive banks are therefore encashing this demand to not only sustain customer loyalty, but indeed, expand their customer base, using the service as a major selling point.

Two models of authentication are supported: smart card and signature image. The product is a distributed database solution.

#### Distinguishing Features of Any Branch Banking

- Support for customer authentication by signature
- Support for customer authentication by smart card
- Option for the base branch [where the account is held] and the operating branch [any other branch in India where withdrawal or remittance is effected] to be either in the same city or in different cities
- Maintenance of information on unsuccessful withdrawals/remittances to facilitate repetition or rolling back later. Guaranteed integrity of transactions by Datanet's TCOP [Transactions Communication Protocol]
- Support for encryption and digital signatures by the RSA public key cryptography with it's BPRO/SS
- Exclusive online IBR [Inter Branch Reconciliation]
- Rich collection of report
